Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-7, 15-25 are rejected under 35 U.S.C. 102(e) as being anticipated by Lerch et al. (6,921,401)

The applied reference has a common inventor with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention “by another,” or by an appropriate showing under 37 CFR 1.131.

With respect to claim 1, Lerch et al disclose an implant for fixing neighbouring bone plate of the cranial bone wherein the plates have an inner surface and an outer surface and the implant comprises an inner bearing element (18) which covers a spacing gap between the bone plates, an outer bearing (20) element which cover the spacing gap and which, when the bearing elements approach one another, connects the bearing elements together by means of a latching or clamping connection (40,53) in such a manner that they are no longer able to be moved apart, wherein the two bearing

elements are additionally connected by means of a thread-like tensioning element (28) which is passed through the outer bearing element in displaceably manner and, when tensioned, moves the inner bearing element towards the outer bearing element; as set forth in column 8, lines 1-67, column 9, lines 1-67; and as best seen in FIGS.1-3.

With respect to claims 2-7, 15-25, Lerch et al disclose all the limitations, as set forth in column 8, lines 1-67, column 9, lines 1-67, column 12, lines 40-67, column 13, lines 1-67, column 14, lines 22-67, column 15, lines 18-67; and as best seen in FIGS.1-16.

Allowable Subject Matter

Claims 8-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
